

# Assignment 3

Create a new branch “assignment3” in your repository and perform the following task.

- You have to create an asp.net mvc web application. Name it BookStore.Web (Solution name should be BookStore)
- Configure Autofac in the project
- Create a WebModule
- Configure Serilog for File sink
- Configure SqlServer log (both file and database log should work in parallel)
- Create an Area named “Admin”
- Create another Area named “Customer”
- Create Dashboard controllers in both areas and create a view page for index action.
- No theme integration or design customization needed.
- Make sure to test autofac integration and error logger working. You can create interfaces and classes to check dependency injection. And can write log in action to test logger.
